These toilet additives are 25% more concentrated than leading brands so a bottle will go a long way. You'll need 50ml of Ultra Blue per 10 litres of tank capacity, a dilution of 200:1; Ultra Pink works at a dilution of 150:1. Ultra Blue is formaldehyde-free and biodegradable, and the Ultra

Pink contains extra lubricant to prolong the life of the seals of the moving parts. It can also be used to stop black and green mould by applying it with a sponge to the affected area, making it even better value for money.

Weight 2.2kg for both bottles

Does the job ★★★★★☆

Value for money ★★★★★★
